## 1. FOUNDAMENTALS ABOUT THE SYSTEM

### Printer Overview

#### Front View

**Fig. 1.1 Printer Front View**

#### Rear View

**Fig. 1.2 Printer Rear View**

## 1.2 Pinter Specification

Item	Specification
Printing Mode	Thermal transfer and direct thermal
Resolution	203 DPI
Max. Print Length	999 mm
Max. Print Width	104 mm
Print Speed	Selectable speed of 4,6,8 inch per second
<b>Environment</b>	
Temperature	5 ~40 °C
Humidity	30 ~ 85 %
Temperature	-10 ~ 60 °C
Humidity	20 ~ 95 %
Ventilation	Free air environment
Sensors	Label gap (256-level), ribbon end (16-level), black mark (256-level), carriage open, ribbon near end
Memory	Flash Memory 2MB, DRAM 4MB and optional Flash Memory 8MB
Interface	RS-232C 56000bps ( Max.), Centronics
Cutter	116 mm width (Paper thickness up to 0.28 mm)
Power	100 VAC to 120 VAC, 200 VAC to 240 VAC Switching mode power supply. Input Frequency : 50Hz to 60Hz Input Current : 4.0 Amps at max. Inrush Current : 40 Amps max. (cold start) at 115 VAC input line voltage. 80 Amps max. (cold start) at 230 VAC input line voltage.
<b>Electrical</b>	
CPU	HITACH SH 7709A

# TTP-248M Bar Code Printer

## Service Manual

TPH	ROHM KF2004-GL41D 550Ω
Stepping Motor	Mitsumi 24V 7.5 Degrees 4Ω Japan Servo KH56KM 2u023 1.80,24V,0.36Ω
Memory	SDRAM, 1M×16Brt×2 7ns Flash Memory: (512K×16Bit) ×2 70ns
Compliance	CE, UL/CUL, BSMI, FCC Class A, TÜV-GS
<b>Communication Interface</b>	
Communication	RS-232C (DB-9) at 2400, 4800, 9600 or 19200 38400, 56000, 57600, 115200, 128000, 50000 baud rate
Word Length	7 or 8 data bits, 1 or 2 stop bits, selectable parity
Communication Protocol	XON/XOFF and DSR/DTR
Parallel Port	Standard parallel interface
Input Buffer	10KB

# TTP-248M Bar Code Printer Service Manual

- RS-232 Interface Pin Configuration:

## 1.3 Available Bar Codes

- Code 39
- Code 39C
- Code 93
- Code128UCC
- Code128 subsets A.B.C
- Code 11
- Codabar
- Interleave 2 of 5
- EAN-8
- EAN-13
- EAN-128
- UPC-A
- UPC-E
- EAN and UPC 2(5) digits add-on
- CPOST
- MSI
- PLESSEY
- POSTNET

- EAN-14
- ITF14
- PDF-417
- Maxicode
- DataMatrix

## 1.4 Text Specification

Font	Width x Length
Font 1	8x12
Font 2	12x20
Font 3	16x24
Font 4	24x32
Font 5	32x48
Font 6	14x19 OCRB
Font 7	21x27 OCRB
Font 8	14x25 OCRA

Font	Width x Length
EAN 1	7x10
EAN 2	14x22
EAN 3	21x33
EAN 4	28x43
EAN 5	35x52
EAN 6	42x64
EAN 7	49x74
EAN 8	56x85
EAN 9	63x97
EAN 10	70x107

Font 1 to Font 8 are all build-in fonts and BF1 fonts.

EAN 1 to EAN 10 are the fonts used on Barcode UPC and EAN series (they content numbers only).

The above are the fonts we approve on our printers.

## Specification of Fonts

	Fixed Pixel	Variable Pixel	Singed byte	Double byte	Decode by Table
<b>BF1</b>	X		X		

# TTP-248M Bar Code Printer Service Manual

<b>BF2</b>	X			X	
<b>BF3</b>	X		X		X
<b>BF4</b>	X			X	X
<b>VF1</b>		X	X		
<b>VF2</b>		X		X	
<b>VF3</b>		X	X		X
<b>VF4</b>		X		X	X

## File Head of Font ( Fixed 32bytes )

Offset 0	B->Bitmap font
Offset 1	0->Fixed pixel 1->Variable Pixel
Offset 2	0->Single Byte Decode 1->Double Byte Decode
Offset 3	Decode by table
Offset 4	0->None 1->Italic
Offset 5-6	Font Height
Offset 7-8	Font Width
Offset 9-10	Font decode start
Offset 11-12	Font decode end
Offset 13	Font decode type
Offset 14	Reserved
Offset 15-16	Font character total
Offset 17-18	Italic Width Variable
Offset 19-31	Reserved

If ( BF1 BF2 VF1 VF2 )

Offset 32-xx : Font Data

Else if( BF3 BF4 VF3 VF4 )

Offset 32-xx : Decoded Table

Offset xx-xx : Font Data

## VF1~4

Font data of variable pixel

(width low byte)(width high byte) Font Data

Font of variable printing spacing is two-byte-width of word in front of the data of every word.

## BF3~4 VF3~4

Decode Table

(char low byte) (char high byte) (offset 4 bytes ==> file start to font data)

The font with decade table, the previous two bytes of every word is the code of the word, and the later four bytes is the displacement from the file head to the position of the data of the word.

## 2. SUPPLY SPECIFICATIONS

### 2.1 Types of Paper

Two types of media are available for TTP-248M/2410M : label and ticket.

In TTP-248M/2410M, there are two types of sensors for paper : gap sensor and black mark sensor.

Label and ticket can be further classified into direct thermal type or thermal transfer type.

### 2.2 Specification

Item	Specification
Type	Label (Continuous, die-cut, fan-fold, ticket, Tag etc.)
Label Width	19~118 mm ( 0.7"~4.65" )
Label Length	10~999 mm ( 0.4"~39.33" )
Label Thickness	0.06~0.25 mm
Label Roll Diameter	203 mm
Paper Core ID	25.7± 0.3 mm
Paper Weight	Less than 280 g/m <sup>2</sup>
Rewinder Roll diameter	138 mm (Max.) with 1" core
Label Roll Diameter without Rewinder	254 mm (Max.) with 3" core
Roll Core Diameter	25 ~ 77 mm
Black Mark Height	1.5 mm ( Min.)
Black Mark Width	3 mm ( Min.)

## 2.3 Ribbon Specification

Item	Specification
Ribbon Shape	Spool type
Ribbon Width	25.4 ~ 114.3 mm
Ribbon Length	450 m
Diameter	Less than 3.5" ( 89 mm)
Roll Up Method	Print surface wound outside as standard.

Note: The maximum length of ribbon depends on its thickness and core outside diameter.

The formula below defines the correlation between ribbon roll length and ribbon core diameter.

$$L = \frac{(D^2 - d^2) \times \pi}{4t} \quad \text{where}$$

L = Ribbon length

D = Max. roll diameter

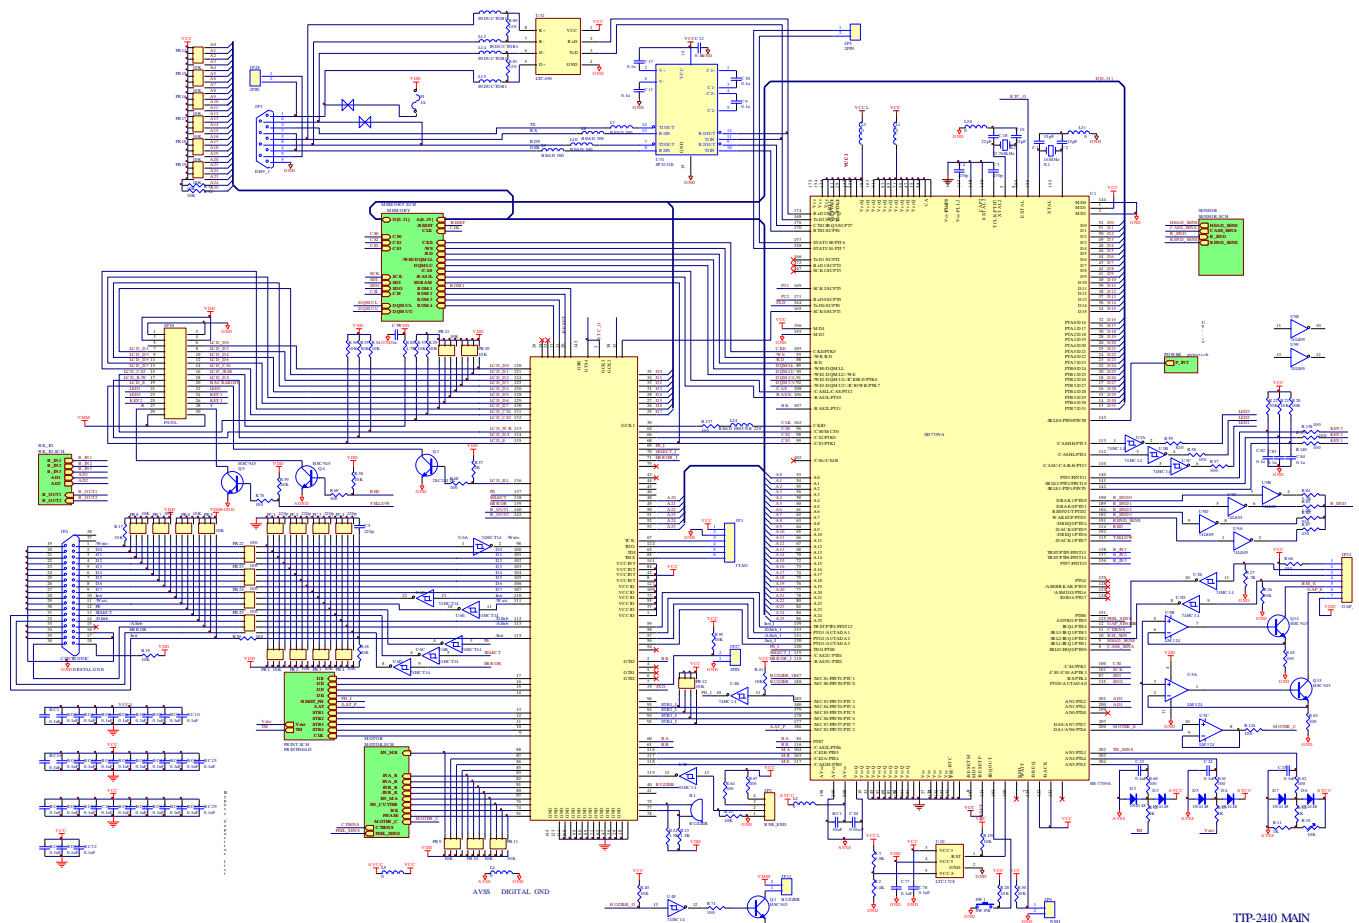

d = Ribbon core outside diameter

t = Ribbon thickness

## 3. CIRCUIT DESCRIPTION

### 3.1 MCU

**Fig. 3.1 MCU Circuit Diagram**

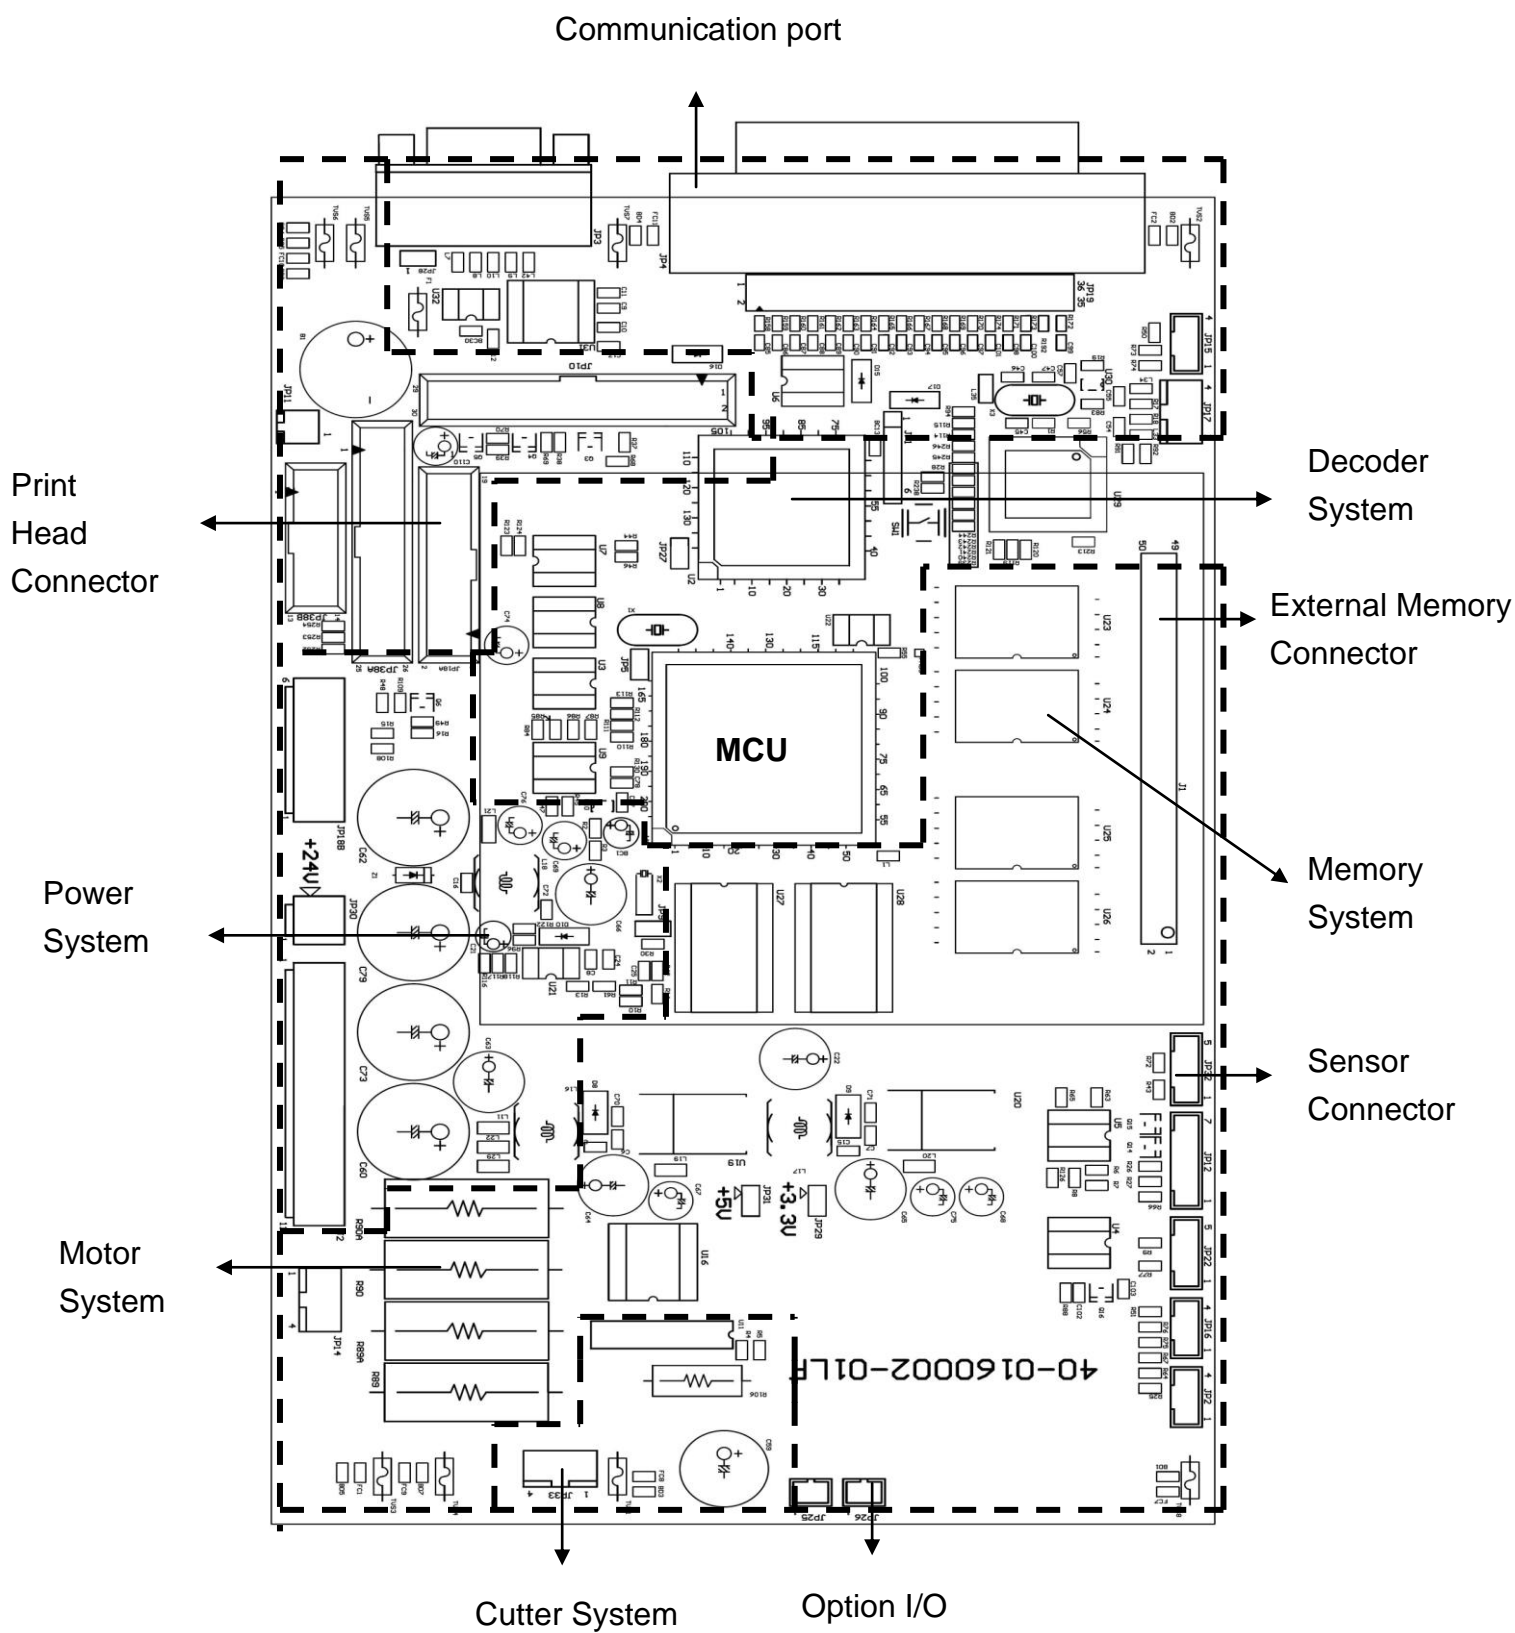

The mainboard of TTP-248M/2410M includes seven system blocks:

- A. Memory System (decoder & memory block)
- B. Motor System (stepping motor, DC motor and cutter block)
- C. Print Head System
- D. Communication System (serial & parallel port block)
- E. Power System
- F. Sensor System
- G. LCD Display System

# TTP-248M Bar Code Printer Service Manual

The figure below shows the PCB system area:

207	C02	AN[7]/DA[0]/PTL[7]	I	A/D converter input / D/A converter output / input port L
208	C01	AVss	—	Analog power supply (0 V)

- Notes:
1. Must be connected to the power supply even when the RTC is not used.
  2. Must be connected to the power supply even when the on-chip PLL circuits are not used (except in hardware standby mode).
  3. Except in hardware standby mode, all  $V_{CC}/V_{SS}$  pins must be connected to the system power supply. (Supply power constantly.) In hardware standby mode, power must be supplied at least to  $V_{CC} - \text{RTC}$  and  $V_{SS} - \text{RTC}$ . If power is not supplied to  $V_{CC}$  and  $V_{SS}$  pins other than  $V_{CC} - \text{RTC}$  and  $V_{SS} - \text{RTC}$ , hold the CA pin low.
  4. A01, A28, A29, AH29, AJ29, AJ02, AJ01, and B01 are NC pins. Do not make any connection to these pins.
  5. 1.9 V for the 133 MHz model, 1.8 V for the 100 MHz model
  6. Drive high when using the user system alone, and not using an emulator or the H-UDI.

## 3.3 Reset Circuit

**Fig. 3.3 Reset Circuit**

This is the reset circuit. The LTC1728IC detects three kinds of DC Voltage (5V, 3V and 1.9V).

VCC3 (VCC, DC3V) input threshold is 3.086

VCC5 (VDD, DC5V) threshold is 4.675.

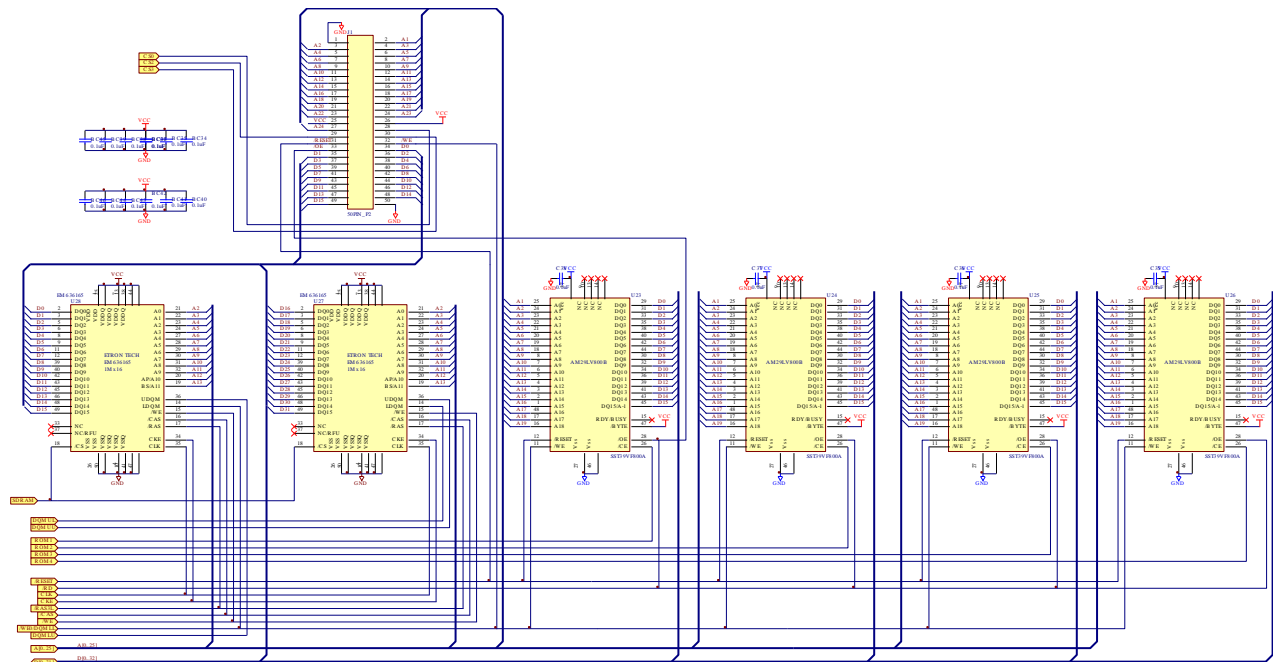

R2

VCCA (  $\frac{R1+R3}{R1+R2+R3} \times VCCL$ , DC1V ) is 1.000

RST is reasserted whenever any one of the Vcc inputs drops below its predetermined threshold and remains asserted until 200ms after all of the Vcc inputs are above their thresholds.

Table 5. Stepping Motor Pattern

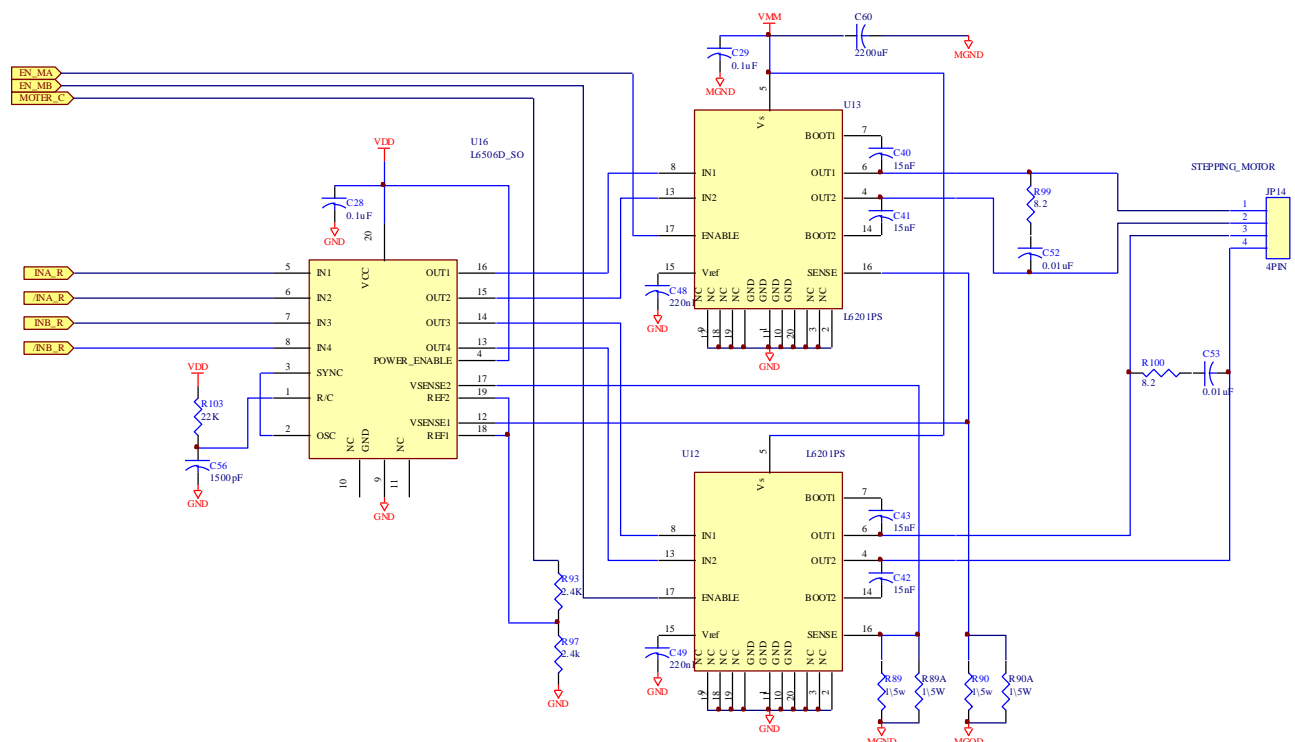

Fig. 3.8 Stepping Motor Circuit

MOTER\_C pin is adjusted by CPU D/A (pin 206) to pass the current of motor.

Pin EN\_MA is used to enable U13 Driver.

Pin EN\_MB is used to enable U12 Driver.

## 3.11 Sensor Circuits

### Ribbon Near End Sensor

The voltage of sender (PIN 3) is about 1.18V (1.17V~1.19V).

When the sensor detects the black area, the voltage of receiver (PIN 2) is  $\geq$  2.10V.

When the sensor detects the white area, the voltage of the receiver (PIN 2) is  $\leq$  1.26V.

**Fig. 3.9 Ribbon Near End Sensor Circuit**

### GAP Sensor

1. Selecting MANUAL GAP and adjust the tension.

When the tension increases, the voltage of the sender (PIN 5) will decrease; when the tension decreases, it will increase.

If adjust the voltage of PIN 5 between tension 000~255, it will alter between 4.4V~3.7V.

2. Selecting AUTO GAP to detect label will get a value of tension, and then selecting the MANUAL GAP.

When sensor detects the paper:

LCD displays Not Through → the voltage of receiver (PIN 2)  $\leq$  2.10V

When sensor detects the gap or does not detect paper:

LCD displays Through → the voltage of receiver (PIN 2)  $\geq$  1.26V

### Black Mark Sensor

Selecting MANUAL Bline, and adjust the tension.

When the tension increases, the voltage of the sender (PIN 6) will decrease; when the tension decreases, it will increase.

If adjusting the voltage of PIN 6 between tension 000~255, it will alter

between 4.4V~3.7V.

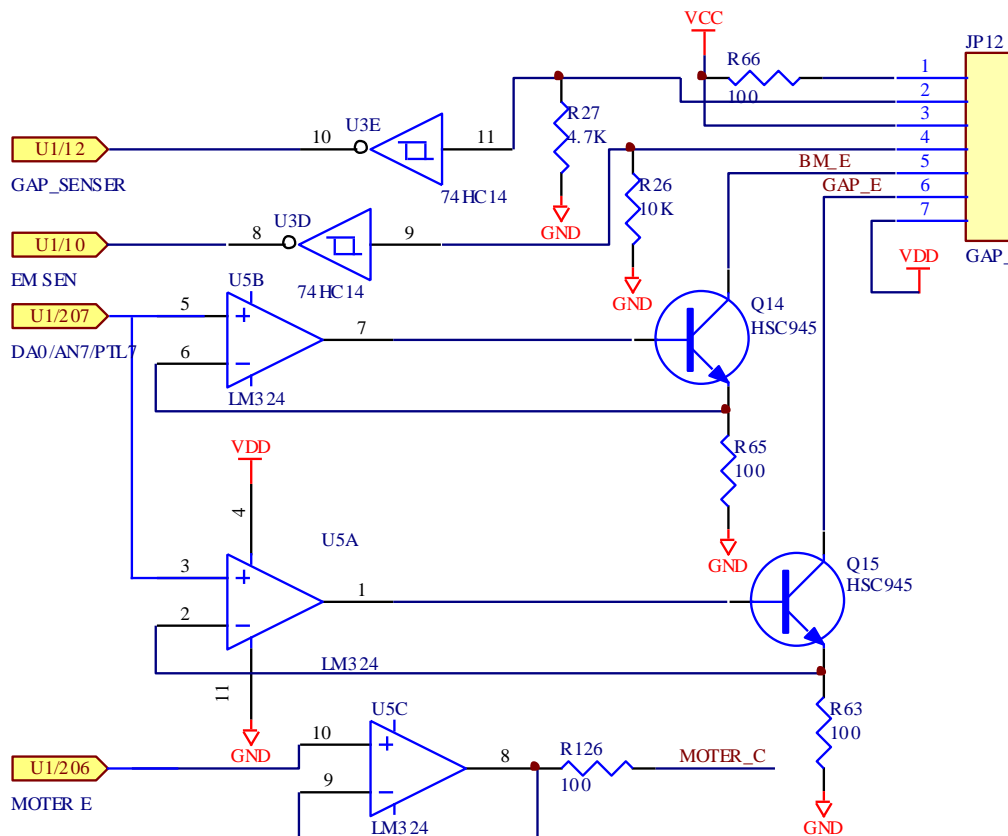

2. Selecting AUTO GAP to detect label will get a value of tension, and then selecting the MANUAL GAP.

When sensor detects white paper:

LCD displays Reflect → the voltage of receiver (PIN 3)  $\leq 2.10V$

When sensor detects the Black mark or does not detect paper:

LCD displays Not Reflected → the voltage of receiver (PIN 3)  $\geq 1.26V$

**Fig. 3.10 Black mark/ Gap Sensor Circuit**

## Peel-off Sensor

The voltage of the sender is about 1.18V (1.17V~1.19V)

When sensor does not detect paper, the voltage of receiver (PIN 2) is  $\geq 2.10V$

When sensor detects the paper, the voltage of receiver (PIN 2) is  $\leq 1.26V$

**Fig. 3.11 Peel-off Sensor Circuit**

## Case Sensor

The voltage of sender is about 1.18V (1.17V~1.19V)

When sensor detects upper cover, the voltage of receiver (PIN 2) is  $\geq 2.10V$

When sensor does not detect upper cover, the voltage of receiver is  $\leq 1.26V$

**Fig. 3.12 Case sensor**

## Print Head Lift Lever Open Sensor

**Fig. 3.13 Print Head Lift Lever Open Sensor Circuit**

## Ribbon End Sensor

1. Selecting MANUAL RIBBON and adjust the tension.

When the tension increases, the voltage of the sender (PIN 5) will decrease;  
when the tension decreases, it will increase.

If adjust the voltage of PIN 5 between tension 000~015, it will alter between  
1.57V~2.70V.

- LCD displays Through  $\rightarrow$  the voltage of receiver (PIN 4)  $\geq 2.10V$ .

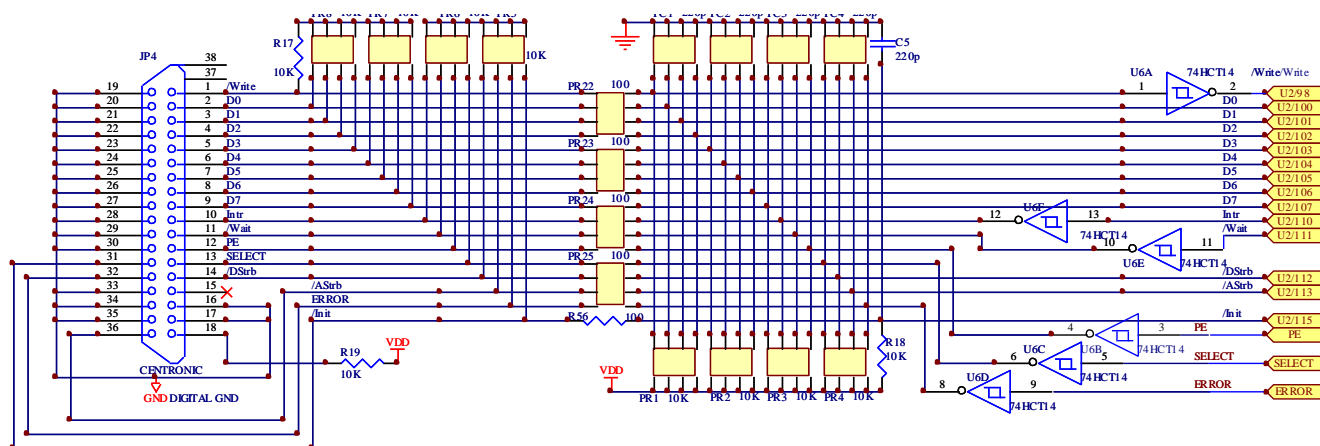

U18 (SP3232E) is RS232 asynchronous communication driver IC.

# TSC

Connecting Your Thermal Printing Needs.™

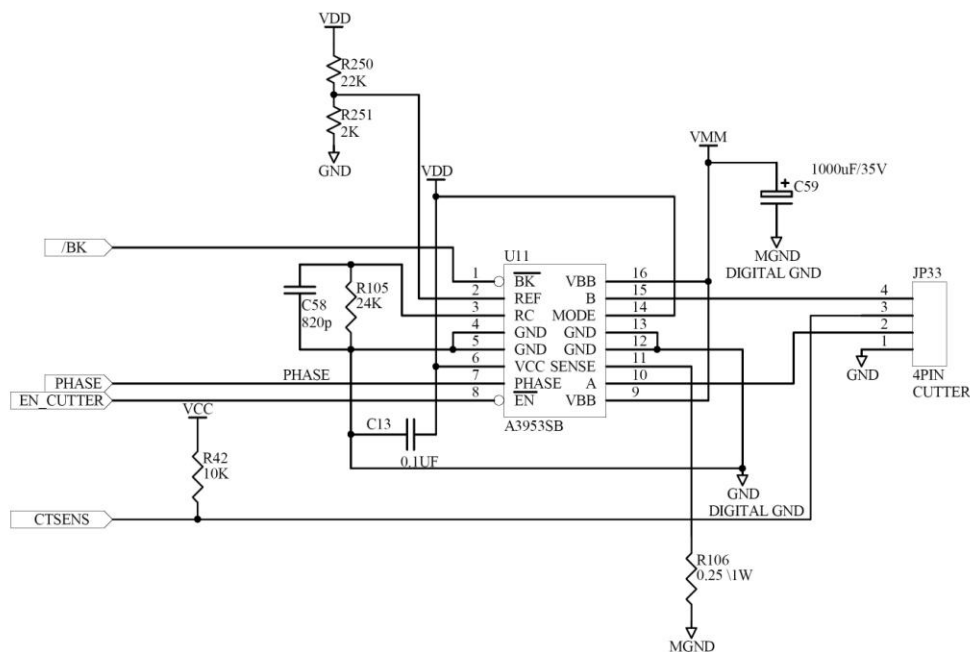

### 3.13 Parallel Port Circuit

### Fig. 3.16 Parallel Port Circuit

Censorings port is SPP mode and one-way communication.

## 3.14 Cutter Drive System

**Fig. 3.17 Cutter Drive Circuit**

JP33Pin 2 and 4 connect DC motor; pin 3 connects sensor.

Pin /BK Cutter is used to stop DC motor.

PHASE is used to control obversion and reverse.

Pin EN\_CUTTER is used to enable Cutter.

Pin CTSENS is the sensor of cutter tab.

### 3.15 PIN Switch Circuits

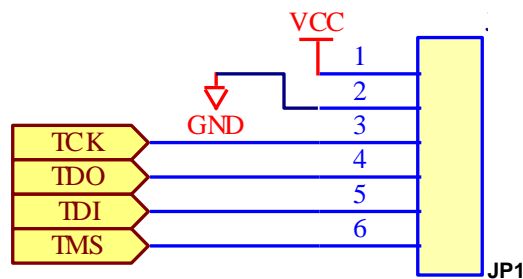

**Fig. 3.18 LTC490 and RS232 pin switch**

## 3.17 Optional Items Circuits

The following circuits provide optional detecting message or input/output control.

**Fig. 3. Optional Item---Buzzer**

## 4. MACHANISM

### 4.1 Remove the Covers and LCD Panel

1. Open Top Right Side Cover.

2. Loosen the four screws used to fix Main Frame and Top Right Side Cover.

Screws

# TTP-248M Bar Code Printer Service Manual

3. Loosen the three screws on Top Left Side Cover.

4. Remove Top Right Side Cover and Top Left Side Cover.

5. Remove the LCD Panel and remove the Lower Front Cover to the right side.

# TTP-248M Bar Code Printer Service Manual

## 4.2 Replacing the Mainboard

1. Disconnect all harnesses.
2. Remove the seven screws on Mainboard, two hexagon screws of serial port and two screws of parallel port.

3. Replace the Mainboard.
4. Reassemble in the reverse procedures.

## 4.3 Replacing the Power Supply Unit

1. Disconnect all harnesses.

Power Supply Unit

2. Turn the printer upside down to loosen the two screws of the Power Supply Unit on the bottom of the printer.  
Two screws

Screws

3. Replace the Power Supply Unit.
4. Reassemble in the reverse procedures.

## 4.4 Replacing the Ribbon Rewind Spindle

1. Refer to 4.3 to remove the Power Supply Unit.
2. Remove the E-ring of the Label Rewind Spindle and the Label Rewind Spindle with belt.

3. Loosen the four screws of the Stepping Motor Frame. Remove the stepping motor assembly and its belts.

4. Remove the E-ring of pulley. And then, remove the pulley.

5. Loosen the three screws on the Cam Spindle Support Plate.

6. Replace the Ribbon Rewind Spindle.

7. Reassemble in the reverse procedures after replacing.

## 4.5 Replacing Ribbon Supply Spindle

1. Remove the four screws of the Ribbon Supply Spindle.

Screws

Screws

2. Remove the shaft bearing.
3. Replace the Ribbon Supply Spindle.

4. Reassemble in the reverse procedures after replacing.

## 4.6 Replacing Label Supply Spindle

1. Refer to 4.2 to remove the Mainboard.
2. Remove the three screws of the Label Supply Spindle.

3. Remove the four screws of the fixing plate.

4. Replace the Label Supply Spindle.

5. Reassemble in the reverse procedures after replacing.

## 4.7 Replacing Label Rewind Spindle

1. Refer to 4.3 to remove the Power Supply Unit.
2. Remove the E-ring and the pulley of the Label Rewind Spindle.

3. Remove the three screws of the Label Rewind Spindle.

4. Remove the four screws of the fixing plate.

5. Replace the Label Rewind Spindle.

6. Reassemble in the reverse procedures after replacing.

## 4.8 Replacing Platen

1. Refer to 4.1 to remove the Top Right and Left Side Covers.
2. Release the Print Head Lift Lever.
3. Remove the screw and the Stripper/Rewind Plate.

4. Remove the Tab Core, Support Plate and Right Shaft Bearing.

5. Remove the two screws on the Gear.

6. Remove the Platen and Left Shaft Bearing.

7. Reassemble in the reverse procedures after replacing.

## 4.9 Replacing Motor

1. Loosen the four fixing screws on the Motor.

2. Disconnect the harness from the Motor

3. Replace the Motor.

4. Reassemble in the reverse procedures after replacing.

## 4.10 Replacing Print Head

1. Remove the screws on the Print Head.

2. Disconnect the two Printer Harnesses.

3. Replace the Print Head.
4. Reassemble in the reverse procedures after replacing.

## 4.11 Replacing Print Head Pressure Adjustment Knob

1. Open the Right Side Cover and Right Side Plate.
2. Remove the Nut from the Print Head Lift Lever. Then remove the Print Head Lift Lever.

3. Remove the 2 screws these are on the TPH switch plate.

4. Remove the four screws these are on the Right Side Fixing Plate, Right Side Fixing Plate, and then, remove the Print Head Adjustment Knob assembly.

5. Remove A.B.C.D in order.
6. Loosen M4 screw, knob E and F.

7. Reassemble in the reverse procedures after replacing.

## 4.12 Replacing Gap/Black Mark Sensor

1. Disconnect the wires of Gap/Black Mark Sensor.
2. Refer to 4.8 to remove the Stripper/Rewind Plate.
3. Loosen two screws on Print Mechanism Lower Frame.

4. Loosen the two screws on the bottom of the Gap/Black Mark Sensor.

5. Remove the screw on the main frame. The Gap/Black Mark Sensor assembly is separated into upper part and lower part.

Screws

6. Push the upper part to the through the hole against to the Print Mechanism Lower Frame, place the upper part upside down, pull the lower part to the right side first, and then, pull out the upper part.

7. Reassemble in the reverse procedures after replacing.

## 4.14 Replacing Print Head Lift Lever Sensor

1. Open the Top Left Side Cover.
2. Remove the Curly plastic pipe, and pull out the harness.
3. Disconnect all harness of Print Head Lift Lever Sensor. Remove the 2 screws of Print Head Lift Lever Sensor.

4. Remove Print Head Lift Lever Sensor.
5. Reassemble in the reverse procedures after replacing.

## 5. TROUBLESHOOTING

### 5.1 Troubleshooting

The following guide lists the most common problems that may be encountered when operating this bar code printer. If the printer still does not function after all suggested solutions have been invoked, please contact the Customer Service Department of your purchased reseller or distributor for assistance.

Phenomenon	Cause of Errors	Recovery Procedure
<b>No ribbon</b>	1. Running out of ribbon 2. The ribbon is installed incorrectly. 3. The ribbon sensor is not been well calibrated.	1. Supply a new ribbon roll. 2. Please refer to the steps in user's manual to reinstall the ribbon. 3. Please calibrate the ribbon sensor
<b>No paper</b>	1. Running out of label 2. The label is installed incorrectly. 3. The moveable gap/black mark sensor is not placed in the proper location.	1. Supply a new label roll. 2. Please refer to the steps in user's manual to reinstall the label roll. 3. Please move the sensor to the proper location.
<b>Poor printing quality</b>	1. Dirt is accumulated on the print head. 2. The density setting is not set properly 3. Ribbon and media are incompatible. 4. The pressure of print head is not set properly	1. Please refer to the steps in user's manual to clear the print head. 2. Adjust the print density and speed. 3. Change proper ribbon or proper label roll. 4. Adjust the print head pressure adjustment knob.
<b>Power indicator does not illuminate</b>	1. The power cord is not properly connected. 2. The voltage setting of power supply in the rear of printer is set incorrectly.	1. Please check whether the power cord is well connected between printer and outlet. 2. Please set the voltage setting of power supply at the rear of printer to the proper voltage.
<b>Paper jam</b>	1. The label size is not set properly.	1. a. Reset the label size. b. Re-calibrate the

	2. Labels may be stuck in side print mechanism.	gap/black mark sensor. 2. Remove the stuck label.
<b>Carriage open</b>	The printer carriage is open.	Please close the print carriage.
<b>Memory full ( FLASH / DRAM )</b>	The space of FLASH/DRAM is full.	Delete unused files in the FLASH/DRAM.
<b>No printout printing through serial port</b>	1. The serial port setting is not consistent between host and printer. 2. The serial port cable pin configuration is not pin to pin assignment.	1. Please reset the serial port setting. 2. Please replace the cable with pin to pin assignment.
<b>On-Line indicator is off, error indicator is on</b>	1. Out of paper or out of ribbon. 2. The gap/black mark sensor or ribbon sensor are not calibrated. 3. The ribbon rewind spindle paper core is not been installed. 4. The diameter of rewind spindle paper core is less than 34 mm.	1. (1) Please check the feed path of label or ribbon. (2) Please supply a new label roll or ribbon roll. 2. (1) Calibrate gap/black mark sensor. (2) Calibrate ribbon sensor. 3. Install a paper core onto the ribbon rewind spindle. (The diameter of the paper core should be larger than 34 mm) 4. Please change the paper core which diameter is larger than 34 mm.

## 5.2 Calibrate Gap/Black Mark Sensor

### 1. Gap/Black Mark Sensor Calibration

This utility is used to calibrate the sensitivity of the gap/black mark sensor. The gap/black mark sensor should be calibrated whenever **changing the label media** or **executing printer initialization**.

Please follow the steps below to calibrate the gap sensor.

- Install the ribbon and label roll as the above-mentioned procedures, and engage the carriage release lever.
- Switch off printer power.
- Press PAUSE key and then switching on printer power. Release the PAUSE  
“GAP/BLINE sensor calibrating...” Message is shown on the LCD display.  
The printer will calibrate the gap/black mark sensor automatically.

## 5.3 Self-test

To initiate the self-test mode, depress the MENU button. Press MENU button to scroll the cursor to Printer test. Press EXE button to enter the submenu and press MENU button to "Printer Config". item. Press EXE button to print printer internal setting. In self-test, a check pattern is used to check the performance of the print head. Following the check pattern, the printer prints internal settings as listed below:

1. Printer model and firmware version
2. Check sum
3. Serial port setting
4. Code page setting
5. Country code setting
6. Print speed setting
7. Print density setting
8. Label size setting
9. Gap (Bline) width and offset setting
10. Backing paper transparency
11. File list
12. Memory available

## 5.4 DRAM Clear

Switch off printer power. Press the PAUSE and FEED button simultaneously then switching on printer power. Release the button for more than 3 seconds. The printer will clear the memory and reset the printer.

Be sure to calibrate the gap register with blank label before printing.

## 5.5 Diagnosis Operation Procedure

When the power is turned on without any button pressed, self diagnosis is performed automatically to test the available memory. If any error occurs during this period, the ERR light will flash.

Do the self-test and inspect the test pattern to check if the Print head is available.

## 5.6 Cleaning Print Head

1. Switch off and unplug the power cord. Allow the printhead to cool for a minimum of one minute.
2. Open the printer cover.
3. Remove the screw by the side of the carriage release lever.
4. Open the printer carriage release lever.
5. Remove the media and ribbon (If loaded).
6. Clean the print head element with a head cleaner pen or use a cotton swab and 100% ethanol to clean the print head surface.
7. Do not close the print head until the alcohol volatilizing.
8. Close the printer cover.

Note:

\*Do not touch printer head by hand. If you touch it careless, please use ethanol to clean it.

\*It's industry alcohol. Please do not use regular alcohol, which may damage the printer head.

## UPDATE HISTORY

Date	Content	Editor
2007/1/17	1. Modify TPH part no. 2. Cancel guillotine cutter part no.	Camille
2007/1/24	1. Add cutter driver IC A3952SB (Non-RoHS) part no.	Camille
2007/1/25	1. Modify the cutter part no. 2. Modify the memory card part no. 3. Add the Internal print server (C) part no.	Camille
2007/3/9	1. Modify the External Ethernet print server (C) part no.	Camille
2007/4/14	1. Update TSC e-mail address 2. Update 6.6 section: cleaning print head	Camille
2007/8/1	1. Company information update	Camille
2008/1/23	1. Revoke part number for 98-0160053-00LF Internal print server (Z), 98-1000017-00LF External Ethernet print server (Z)/US and 98-1000018-00LF External Ethernet print server (Z)/EU 2. Modify description for 98-0220078-00LF Internal print server (C), 98-1000008-00LF External Ethernet print server (C)/US and 98-1000009-00LF External Ethernet print server (C)/EU	Camille
2008/7/11	Remove the parts list section	Camille
2011/1/25	Modify TSC address	Camille
